✦ (+91) 7026878784 ✦ Bengaluru, KA

EDUCATION

- **BMS Institute Of Technology, Bangalore**
Bachelor's Degree in Computer Science and Engineering **CGPA: 8.8/10**
- **National Public School, Yelahanka** **Percentage: 96%**

PROJECTS

- **AI-POWERED ISL TRANSLATION SYSTEM - Smart India Hackathon submission, 2024** [GitHub](#)
 - Built a real-time Indian Sign Language translator leveraging computer vision algorithms, gesture training pipelines, and multilingual audio output (English/Hindi).
 - **Reduced translation latency by 40%** (1.2s avg. response) vs. existing solutions (~2s), with **90% accuracy** in controlled environments. Context-aware module **cuts user actions by 30%** for common phrases in testing.

Stack: Python for backend services, OpenCV, MediaPipe, NLP Model, Text To Speech - TTS.

- **PLUGGABLE UNIVERSITY WIDGET FOR HAPPYFOX PRODUCT SUITE**
 - Designed and scaled a distributed, multi-tenant headless CMS with UUID-based product scoping across multiple services, demonstrating fault-tolerant, scalable system design.
 - Optimized API performance using algorithmic improvements: pagination, query tuning, selective prefetching, and caching strategies - cut response times by **40%** and queries by **60%**.
 - Delivered secure APIs with authorization, rate limiting, and custom request headers, achieving **95% success rate under 200ms**.
 - Architected features including role-based content delivery, content reuse, real-time distributed search, and video progress tracking; boosted engagement by **30%** through recommendations.
 - Streamlined DevOps with CI/CD pipelines, containerization (Docker), automated migrations, and **90%+ test coverage**.
 - Led a team of 3 developers, setting API design and documentation best practices.

Stack: React, Wagtail CMS, Django REST Framework, PostgreSQL, Redis, JWT Auth, Docker, CI/CD

TECHNICAL SKILLS

- **Skills:**
 - **Languages:** C++, Python, JavaScript, HTML, CSS, SQL
 - **Backend & APIs:** RESTful API Design, Server-side architecture, JWT, OAuth
 - **Libraries:** Node.js, React, Bootstrap, OpenCV, MediaPipe
 - **Frameworks:** Wagtail, Django, Godot Game Engine, Tensorflow, Material UI.
 - **Database:** MongoDB, PostgreSQL, MySQL, SQLite, Django ORM
 - **Tools:** GitHub, Docker, Swagger, Postman, Vercel
 - **OS & CLI:** Bash, Linux
 - **Others:** DSA, Algorithm Design, Complexity Analysis, SDLC, Distributed Systems Fundamentals, Microservices Architecture, System Integration Testing (SIT), User Acceptance Testing (UAT)

EXPERIENCE & ACHIEVEMENTS

- **Experience**

- ***Backend Developer Intern*** at [HappyFox](#) - (2 months)
 - Designed and implemented a production-grade, modular, scalable University Widget integrated across HappyFox product suite, handling multi-tenant data isolation at scale.
- ***Full Stack Developer Intern*** at [Mphasis](#) - (3 months)
 - Built a full-stack meeting notes application with real-time speech-to-text processing, user authentication, distributed notification management, and a comprehensive Testing and Debugging Module to ensure extensive Unit, Integration and User Testing procedures.
- ***Software Engineer Intern*** at **Greenway Health** - (6 months)
 - Engineered full-stack features for a production Electronic Health Record (EHR) system serving healthcare providers, contributing to both secure frontend (React) and scalable backend (Java/Python) services on AWS.
 - Implemented end-to-end security for frontend and backend: input validation, secure authentication flows, and data encryption to meet healthcare compliance standards.
 - Operated within an Agile/Scrum team using Jenkins CI/CD pipelines, Gerrit code review, and full SDLC practices — shipping reliable, reviewed code to production in two-week sprint cycles.
